EDUCATION

UC Berkeley

Expected: ~Spring 2027

Bachelor of Science, EECS

Berkeley, CA

- **Activities:** Unity Theme Program Member, Formula Electric Berkeley's General Member, Solar Vehicle Team's Electrical Engineer.
- **Completed Relevant Coursework:** IC Devices, Signals and Systems, Data Structures, Machine Structures, Microelectronic Devices and Circuits, Photovoltaic Devices, Microfabrication Technology.

SJCC/EVC

Expected: ~Summer 2026

Associate in Arts, Economics

San Jose, CA

WORK EXPERIENCE

Boys & Girls Club

April 2025 – August 2025

Youth Development Professional

San Jose, CA

- Supported academic, social, and emotional development for students in Kindergarten–8th grade through structured enrichment programming.
- Designed and led an independent STEM class for the entire summer, managing curriculum planning, instruction, and classroom engagement.

AMC Theatres

January 2023 – August 2025

Crew Member

San Jose, CA

- Worked as a minimum wage employee.

Dell Technologies

October 2019 – June 2023

Business Intern

San Jose, CA

- Participated in a mentorship experience focused on understanding Dell Technologies' business models and organizational structure. Engaged with insights from various industry professionals, learning about their project work, career paths, and strategies for success.

PROJECTS

+12V PWM Motor Speed Controller (Solar Vehicle Team) [Feb 2026 - Feb 2026]

- Designed and built a PWM DC motor speed controller using an LM555 timer and NMOS driver stage. Implemented an adjustable duty-cycle control using a diode-isolated potentiometer network, with a flyback diode for inductive load protection. The circuit generates a variable PWM signal to efficiently control motor speed from a 12 V supply.

CAN Bus Network PCB (Formula Electric Berkeley) [Feb 2026 - In Progress]

- Basically finished a project designing a CAN Bus network with different types of sensors through KiCad but I want to refine it further in the future. The nodes include a coolant temp node, IMU node and GPS node using various components as well as utilizing Buck and LDO converters.

NMOSFET Design Project [Dec 2025 - Dec 2025]

- Designed and simulated a 25 nm gate-length NMOS transistor using Synopsys Sentaurus TCAD as part of UC Berkeley's EE130 (Integrated-Circuit Devices) course.

SKILLS

- **Skills:** Microfabrication, PCB Design, LTSpice, Computer Simulations, Python, C++, Java, Assembly, etc.
